RÉMY KALOUSTIAN

remy.kaloustian@gmail.com   remykaloustian.github.io
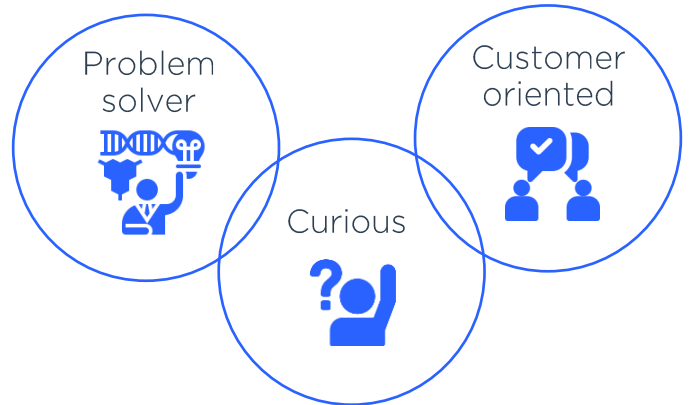

Hi, nice to meet you!

I am a French **Software Engineer** with the American dream in my heart.

MILESTONES

2013
2015
University of Technology Degree, Computer Science (France)

2015
2018
Master's Degree in Software Engineering Specialty UI/UX/Front-end (France)

2018
2019
Software Engineer at Codelitt Incubator, in Miami

Today
Located in France, willing to relocate in the US

QUALITIES

Problem solver

Customer oriented

Curious

LATEST WORK

BAKERY - *React, Redux, HTML/CSS* (personal project, started in October, in progress)

I wanted to understand the technical challenges around an app like Amazon.com, so I built one that does the same, but just for pastries. I implemented features such as adding items to a cart, changing quantities of items, changing or adding an address (all these without needing a refresh). I also implemented the full management of the UI through React (no jQuery, no passing parent functions to children components).

HALO - *React, Redux, HTML/CSS* (Codelitt, 2018-2019)

Halo is an end-to-end commercial real estate transaction management tool for brokers and their clients. I learned a lot working on Halo because it was a big project. It helped me improve my debugging skills, productivity and communication. I worked on making sure the app looked like the designs on every platform/resolution, and implemented client features for the presentation part of the app.

FLETCHER - *Ruby on Rails, React, Alt.js, HTML/CSS* (Codelitt, 2018-2019)

Fletcher was my first project with Ruby on Rails. This app allows clients from different organizations to document, rate, and share their experiences of vendors. It allowed me to improve my learning speed, my capacity to adapt, and my full-stack skills. I developed features like data exportation to a file, notification settings and notification implementation, multiple Yammer keys management (for login and sharing).

I have worked on a lot more projects, using **Java, C++, C#, SQL, Docker**... (see my website for more).

DAILY HABITS

- Keeps the body and brain super fit for high performance
- Generates through-the-roof levels of energy
- Creates sharp focus

- Improves analytical thinking
- Sharpens the brain
- Adds more knowledge in engineering/personal development/business/history

WHY HIRE ME

I am always focused on improvement (through books and personal projects).

I love challenges (living in a different country, learning a new technology, helping new customers).

I love helping a team deliver fantastic products (especially an American team).
